PROFILE SUMMARY

Final-year Computer Science Engineering student with a strong focus on Artificial Intelligence workflows relevant to LLM training, including building and refining high-quality structured datasets, understanding model training pipelines, and working with real-world data used in industrial AI systems. Possesses solid fundamentals in Artificial Intelligence, Machine Learning, Data Science, and Computer Engineering, with the ability to reason analytically and adapt quickly to advanced AI environments. Experienced in Python-based ML development, data preprocessing, feature engineering, model evaluation, and iterative improvement, along with exposure to end-to-end system development using Flask, SQL, and APIs. Demonstrates clarity of thought, problem-solving ability, and consistent learning through projects, internships, workshops, and hackathons, with a strong interest in contributing to next-generation LLM development in an industry setting.

EXPERIENCE

AI/ML Intern	(2025)
ICT Academy of Kerala, Calicut	
- Worked on real-world datasets involving data cleaning, preprocessing, and feature selection for machine learning models. - Strengthened analytical thinking and problem-solving skills through model evaluation and iterative improvement. - Developed a strong foundation in applying ML workflows in practical, industry-oriented scenarios.	

ACADEMIC QUALIFICATION

- Bachelor of Technology – **Computer Science and Engineering**,
Ahalia School of Engineering & Technology, Palakkad | **2026(Present)**
CGPA 7.37 out of 10
- Senior Secondary (Class 12) - CBSE, Palakkad
Percentage 97% | **March, 2021**
- Secondary Education (Class 10) - CBSE, Thrissur
Percentage 98% | **March 2019**

PROJECTS

Controlled Image Generation & Consistency Pipeline	(2025 – Present)
Type : Academic Project Objective : Building a diffusion-based image generation system focused on prompt control, visual consistency, and constraint-driven outputs for complex scenes. Technology Used : Diffusion models, Python, prompt engineering workflows, generative AI tools	
Customer Shopping Behavior Analytics	(January 2026)
Type : Academic / Data Analytics Project Objective : Analyzed customer purchasing patterns and spending behavior using exploratory data analysis and machine learning techniques. Technology Used : Python, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn	
Income Prediction ML Model	(June 2025)
Type : Academic / Internship Project Objective : Developed a machine learning model to predict income categories using real-world demographic data through systematic preprocessing, feature engineering, and model evaluation. Technology Used : Python, Pandas, NumPy, scikit-learn, data preprocessing pipelines, ML evaluation metrics	
Fake Product Review Detection System	(March 2024)
Type : Academic Project Objective : Built an NLP-based system to detect misleading product reviews through comparative evaluation of classical and transformer-based models. Technology Used : Python, scikit-learn, Pandas, NumPy, Matplotlib, Google Colab, BERT, Bi-LSTM, SVM	
Women Safety Companion	(August 2024)
Type : Academic Project Objective : Designed an intelligent safety system that provides real-time alerts using ML, IoT sensors, GPS tracking, and mobile integration. Technology Used : Python, Machine Learning, IoT Sensors, GPS Tracking, Android App, Firebase, Twilio API	

CORE COMPETENCIES

Programming Languages	: Python, JavaScript, HTML/CSS
Machine Learning / NLP	: Text classification, feature extraction (TF-IDF), model training, model evaluation
Models Used	: Logistic Regression, SVM, Random Forest, XGBoost, BERT, DistilBERT, Bi-LSTM
Platforms	: Google Colab, Firebase, Git, Lovable.dev, AI-assisted development tools
Generative AI (On-going)	: Diffusion-based image generation, prompt control, consistency experimentation

ACTIVITIES & CERTIFICATIONS

- Best Performer** - Hackathon by TinkerHub, for innovative tech solution (Feb 2025)
- Google Cloud Computing – NPTEL|Aug 2025**
Hands-on experience with cloud concepts
