PROFILE SUMMARY

Computer Science Engineering student with a strong foundation in software development and currently pursuing Java Full Stack Development. Proficient in Java, SQL, HTML, CSS, and JavaScript with a good understanding of object-oriented programming, database management, and web application development. Passionate about building scalable software solutions, learning modern backend technologies, and continuously improving problem-solving skills through hands-on projects.

EXPERIENCE

LLM Post-Training Intern | Ethara AI (Green Rider Technology LLP)

Contribute to LLM post-training by generating high-quality human-aligned training signals through strict instruction-following evaluation, correctness checks, and quality assessment across text, image, and video modalities. Work includes ranking, comparison, prompt writing, and defensible decision-making (tie/skip) to improve model behavior.

AI/ML Intern | ICT Academy of Kerala

Developed an end-to-end personality prediction system using NLP pipelines and multiple ML models, including experiments with BERT and DistilBERT embeddings. Evaluated models using standard classification metrics to analyze real-world performance trade-offs.

ACADEMIC QUALIFICATION

- Bachelor of Technology – **Computer Science and Engineering**,
Ahalia School of Engineering & Technology, Palakkad | **2026**
CGPA 7.68 out of 10
- Senior Secondary (Class 12) - CBSE, Palakkad
Percentage 97% | **March, 2021**
- Secondary Education (Class 10) - CBSE, Thrissur
Percentage 98% | **March 2019**

PROJECTS

Controlled Image Generation & Consistency Pipeline (May2026)

- Type** : Academic Project
- Objective** : Building a diffusion-based image generation system focused on prompt control, visual consistency, and constraint-driven outputs for complex scenes.
- Technology Used** : Diffusion models, Python, prompt engineering workflows, generative AI tools

Customer Shopping Behavior Analytics (January 2026)

- Type** : Academic / Data Analytics Project
- Objective** : Analyzed customer purchasing patterns and spending behavior using exploratory data analysis and machine learning techniques.
- Technology Used** : Python, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn

Income Prediction ML Model (June 2025)

- Type** : Academic / Internship Project
- Objective** : Developed a machine learning model to predict income categories using real-world demographic data through systematic preprocessing, feature engineering, and model evaluation.
- Technology Used** : Python, Pandas, NumPy, scikit-learn, data preprocessing pipelines, ML evaluation metrics

Fake Product Review Detection System (March 2024)

- Type** : Academic Project
- Objective** : Built an NLP-based system to detect misleading product reviews through comparative evaluation of classical and transformer-based models.
- Technology Used** : Python, scikit-learn, Pandas, NumPy, Matplotlib, Google Colab, BERT, Bi-LSTM, SVM

CORE COMPETENCIES

- Programming Languages** : Java, SQL, JavaScript, Python
- Frontend Technologies** : HTML5, CSS3, JavaScript, Responsive Web Design
- Backend Technologies** : Core Java, Advanced Java, JDBC, Servlets, JSP, Spring Boot (Learning), REST APIs (Learning)
- Database** : MySQL, SQL
- Tools & Platforms** : Git, GitHub, VS Code, MySQL Workbench
- Core Computer Science** : Object-Oriented Programming (OOP), Collections Framework, Exception Handling, Multithreading, Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, SDLC

ACTIVITIES & CERTIFICATIONS

- Best Performer** - Hackathon by TinkerHub, for innovative tech solution (Feb 2025)
- Google Cloud Computing – NPTEL|Aug 2025** - Hands-on experience with cloud concepts
